Problem Background

Billy, a chef in a premium hotel, wants to start his own business after earning good money from his job. Billy is thinking to start a restaurant in Toronto, Canada but is confused about the location. He doesn't want to much on the tangible assets like Land & Building but wants to open his restaurant in a good infrastructure location and probably with other customer attractions. So, he was thinking to open his restaurant in a mall, but he is confused in which mall. He wants to open the same in one of the best rated malls in Toronto.

Potential Solution

We would be exploring the malls in Toronto, using FourSquare API and then further seeking the rating for the same. Then we would come up with the highest rated mall or with a list of top-rated malls.

Data

No such starting data is required, the necessary data will be attained via FourSquare API to analyze the ratings of the mall.
